

# Four important factors

- **Cooperation instead of competition**
- **Investments that makes use of oil and gas more environmentally friendly**
- Consumer awareness and interest green energy
- Knowledge to developing countries

Cooperation

# High cooperation & high investment

- High exchange of technologies between countries.
- Investments in developing countries.

# High cooperation & low investments

- The developing countries will increase their industrial capacity.
- Emissions of CO<sub>2</sub> will not decrease.

# Low cooperation & high investments

- Environmental factor will be better but not in developing countries.

# Low cooperation & low investments

- Worst scenario for the environment.
- The oil and gas industry will make profit due to low demands on expensive green solutions.
